

## CUBEZ TOWER

Created By Chris Horne, Amscan International Limited.

The Unique shape of Anagram CubeZ let you create stunning geometric designs such as this tower, which is great as a focal point, but can be used to flank entrances and other key areas of your event.

### Product Required:

- As many CubeZ as required to create the size of tower you need, in your choice of colours
- Single sided tape, such as Stretchy Balloon Tape (CC10525)

### Construction Method:

1. Inflate all of the CubeZ with air, and tape up the tails for neatness.
2. Position 4 CubeZ as shown in diagram 1, and tape them together top and bottom, as shown by the red markings. Make sure there is a piece of tape at each place where corners of the CubeZ meet.
3. Position 4 more CubeZ as shown in diagram 2, and place the taped CubeZ from step 2 on top.
4. Tape the two layers of CubeZ together as shown in diagram 3, with the blue markings. Use a piece of tape every time corners meet.
5. Continue adding layers of CubeZ until the tower is the height you need.

**Estimated Labour time: 30 to 60 minutes, depending on size..**
