

## GEODE

Created By Chris Horne, Amscan International Limited.

This geometric, contemporary and stylish design works well as a décor display, or as a centrepiece for larger venues.

### Product Required:

- 6 x Silver Anagram Diamondz: (2833999)
- Strong adhesive tape (Stretchy Balloon Tape or similar)

### Construction Method:

1. Inflate the 6 Diamondz with air or helium, depending on how the finished design is to be displayed. Neatly tape up the tails.
2. If you imagine a cube with a diamond balloon attached to each face with points outward, that is the shape you are constructing.
3. Using strong adhesive tape, attach four of the balloons around a fifth, taping at the corners. Ensure the joints are secure. Follow the picture above for guidance.
4. Bring the four balloons together and tape the corners together where they meet to begin forming the shape.
5. Tape the final Diamond balloon into the resulting square on the rear of the design to complete.
6. Attach a ribbon and weight (if helium filled) or suspend from above (if air filled)

**Estimated Labour time: 10 - 15 minutes.**

As Anagram Diamondz are available in a range of solid colours and many different prints, this design can be adapted to suit every occasion!
